

1x2 Optical Switch

Product Description

Lightwave Link Inc. 1x2 optical switch is designed for use in optical fiber communication networks and measurement instruments. The switch consists of two ports that selectively transmits, redirects, or blocks optical power in a fiber optic transmission line. The optical switch must be actuated to select or change between two states. Furthermore, for the Latching type, it only takes an electrical pulse width with duration $\geq 20\text{msec}$ to change the state. As a result, it consumes low electric energy to operate the optical switch. Lightwave Link Inc. 1x2 optical switch fully complies with RoHS Directive 2002/95/EC (2008/385/EC).

Features

- Smallest Size
- Low Insertion-Loss
- Fast Switching Speed
- PCB Mountable
- Available in Single Mode / Multi Mode
- RoHS Compliance

Applications

- Optical network protection and restoration
- Optical network monitoring
- Reconfigurable add/drop multiplexers
- Transmission equipment protection
- Research and development
- Wavelength router

Performance Specification

Parameter	9 μm Core Single Mode			50 μm or 62.5 μm Core Multi Mode			Unit
	Min.	Typ.	Max.	Min.	Typ.	Max.	
Wavelength Range ¹	1260~1630			850/1300			nm
Insertion Loss ²		0.5	1.0		0.3	0.6	dB

Dimension (H*W*L)	7.6 x 11 x 22.6						mm
Weight ⁴	10						g

1. Special wavelength would be upon request.
2. Optical parameters excluded connectors.
3. A minimum $\geq 20\text{ms}$ pulse is recommended for latching type of switch.
4. The product weight excluded optical connectors.

Application Circuitry for Latching Type

To provide sufficient power to switch, two application circuits using 2N2222 BJT and ULN2003 Darlington pair IC are showed below.

S0 = High, S1 = Low. To change the OSW state to ON state.
 S0 = Low, S1 = High. To change the OSW state to OFF state.

*S0, S1 Pulse width \geq 20msec

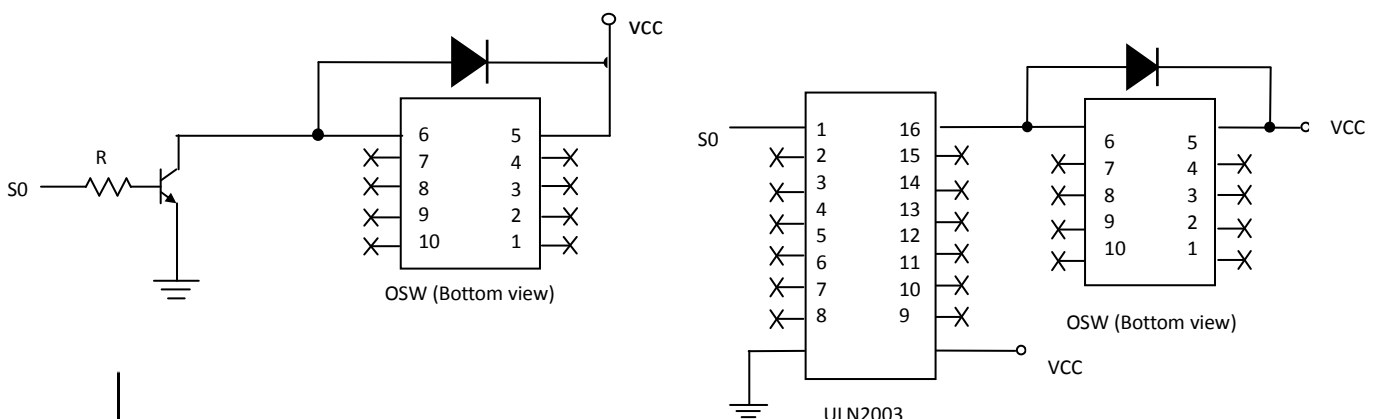

The Recommend Circuitry for S0 and S1 Stand High Level Simultaneously

S0 = High, S1 = High.
 The OSW maintains on the last changed state.

Application Circuitry for Non-Latching Type

To provide sufficient power to switch, two application circuits using 2N2222 BJT and ULN2003 Darlington pair IC are showed below.

S0 = Low. To change the OSW state to default mode(CH1).
 S0 = High. To change the OSW state to CH2.
