

# NanoSpeed™ Broadband 1x2 Fiberoptic Switch

(patent pending)

## Product Description

The NS broadband Series 1x2 solid-state fiber optic switch connects optical channels by redirecting an incoming optical signal into a selected output optical fiber. This is achieved using patent pending non-mechanical configurations with solid-state all-crystal designs, which eliminates the need for mechanical movement and organic materials. The configuration eliminates waveplates for a wide wavelength operation. The NS fiberoptic switch is designed to meet the most demanding switching requirements of ultra-high reliability, fast response time, continuous switching and bidirectional operation.

The device can be driven by a cost effective circuit with 12V input voltage and 0-5 V control signal
